

PS 160 – Physics II for Engineers  
Embry-Riddle University  
Spring 2010

---

*Instructor:* M. Anthony Reynolds  
*email:* reynodb2@erau.edu  
*web:* <http://faculty.erau.edu/reynolds/ps160> (or Blackboard)  
*phone:* (386) 226-7752  
*office:* Lehman 313  
*office hours:* MW 3:30-4:30, TTh 2:30-4:30, Lehman 313

---

*Required text:* *University Physics*, 12th edition, by Young & Freedman, Volume II  
Chapters 13-20, 33-36  
*Recommended:* *Physics*, by Tipler – QC 21.2 .T548  
*Lectures on Physics*, by Feynman – QC 23 .F47  
“*Hyperphysics*” <http://hyperphysics.phy-astr.gsu.edu/hbase/hframe.html>  
“*Simple Nature*” <http://lightandmatter.com/arealsn.html>  
*Understanding Physics*, by Asimov – QC 23 .A8  
*Cartoon Guide to Physics*, by Gonick & Huffman – QC 24.5 .G66

---

<u><i>Percentage system:</i></u>		<u><i>Grading scale:</i></u>	
1 final exam	20%	A	90% –
3 tests	60% (20% each)	B	75% – 89%
Problem sets	10%	C	60% – 74%
Mastering Physics	10%	D	50% – 59%

---

IMPORTANT NOTE

Listening to lectures is not enough (*you retain only 10% of what you hear ...*). All processes of learning are somehow connected to active participation, and the learning of physics is no exception. Therefore, it is imperative that you work diligently at your own desk (*... 80% of what you practice ...*). However, this does not mean that you should only work alone. I encourage you to form study groups and collaborate with your classmates (*... and 90% of what you teach to others!*).

---

\* This syllabus incorporates all existing University policies, especially those sections of the *Student Handbook* pertaining to academic integrity, civility, and respect. \*

**Course Description:** Simple harmonic motion, waves, fluids, heat, kinetic theory, thermodynamics. Geometrical and physical optics. **Prerequisite:** PS 150. **Corequisite:** MA 242.

### **Topics to be covered**

1. Oscillations, Waves, Sound, Fluid Mechanics
  - a. Hooke's law, simple harmonic motion – mass on a spring, pendulum
  - b. Damped, driven oscillations, resonance
  - c. Traveling waves – vibrating string, sound, waves in solids, surface waves
    - i. Transverse, longitudinal
    - ii. Doppler-Fizeau effect
  - d. Sound intensity, decibel scale, inverse-square law
  - e. Superposition, standing waves in strings, organ pipes, beats, Fourier series
  - f. Pressure, Pascal's law, Archimedes' principle, buoyant force
  - g. Laminar flow, continuity equation, Bernoulli's equation, drag
  - h. Toricelli's theorem, Venturi tube, Pitot tube
2. Thermal physics, thermodynamics
  - a. Temperature scales, absolute zero, thermal expansion, thermal equilibrium
  - b. Kinetic theory of gases, Maxwell-Boltzmann distribution, equipartition theorem
  - c. Ideal gas law, Vapor pressure, atmospheric lapse rate
  - d. Calorimetry, heat capacity, latent heat, changes of phase, phase diagram
  - e. 0th – 3rd laws of thermodynamics, mechanical equivalent of heat
  - f. Conduction, convection, radiation, thermal conductivity, Stefan's law
  - g. (Ir)Reversible processes, heat engines, refrigerators, Carnot cycle, entropy
3. Geometric optics, Physical optics, Interference
  - a. Light intensity, inverse-square law
  - b. Reflection, refraction
    - i. Hero's law, Fermat's principle, Snell's law, Huygens's principle
    - ii. Index of refraction, speed of light, dispersion
    - iii. Total internal reflection, Brewster's angle
  - c. Concave/convex mirrors, converging/diverging thin lenses, paraxial approx.
    - i. Gaussian lens formula, lens-maker's formula
    - ii. Ray diagrams, principal rays, focal point, focal length
    - iii. Eyes, cameras, telescopes, microscopes
  - d. Young's double-slit, thin films,
  - e. Fraunhofer diffraction, Rayleigh's criterion
  - f. Single-slits, diffraction gratings
  - g. Bragg diffraction, Laue patterns

### **RULES**

1. Arrive on time; depart on time.
2. Take notes, and bring calculator to each class.
3. No eating, no cell phones.

### **Final Exam**

Comprehensive; two-hour; closed book; closed notes.

Tools: pen or pencil, scientific calculator, 3x5 card (both sides) for equations.

Date: Tuesday, 4 May, 8:00 am – 10:00 am.

### **Tests**

One-hour; closed book; closed notes.

Tools: pen or pencil, scientific calculator.

Dates: Fri 12 Feb, Fri 26 Mar, Wed 28 Apr.

Final exam will replace lowest test.

### **Problems**

17 sets; 6 problems each; must be neat and stapled.

Due Dates: every other class period – see schedule.

Graded on completeness and effort.

### **Mastering Physics**

17 sets.

Due Dates: every other class period – see schedule.

---

All assignments are due at the *beginning* of class on the due date, after which they will be considered late and the score will be reduced by 50%. After the *beginning* of the *next* class period, they will not be accepted.

---

### **General study habits**

**Repetition is critical for creating long-term memories.** A good method for learning is the following sequence: read, listen, write, re-read, re-write, practice, and review. The textbook should be read THREE times: read once before class, read deeply (at least) once after class, and once as a review. In addition, you do not read textbooks as you would the newspaper. You must work through the examples, all mathematical steps should be confirmed, and you should write notes in the margins (it is your book, you can write in it!).

### **Notes**

Taking notes during lecture is important – but you must review and re-copy those notes after class (within a few hours) for them to be useful. Notes that are never reviewed are less than worthless: they give you a false sense of security. It is important that you get into the habit studying every day.

### **Problem Solving**

Solving problems is **critical** to your success in this course. An excellent method to prepare for the exams is to attempt problems at home in an exam-type environment. That is, once you have solved a group of problems, put aside the solutions and pretend that they are questions on an exam – attempt to solve them again, but without any help. Solve problems according to the following rules of coherence and readability:

- Describe *briefly*, but in clear and complete sentences, the basic principles used to solve the problem and explain the basic equations that are used in the solution [DO NOT simply rewrite the question].
- If a physical situation is discussed in the problem, draw an appropriate diagram.
- Identify in words, or by clear references to the diagram, all the symbols you use.
- Work through the problem symbolically, getting a simplified symbolic answer, and only substitute numbers (if appropriate at all) at the very end.
- If you obtain an explicit numerical solution, comment on whether the value you get is reasonable.
- Put boxes around your final answers.
- Write up the problem sets neatly.

Do not simply copy another student's work (see the statement about plagiarism above), and do not simply copy from the solutions manual, but I recommend that you form study groups and work together. This can help you through difficult sections and problems. I encourage you to discuss, argue, arm-wrestle, and finally master the problems. However, I expect you to write up your solutions individually, showing your own insights.

### **Mastering Physics**

Mastering Physics is a useful online tutoring tool. While it does not replace an expert tutor, it can substitute if a tutor is not available. To encourage you to make use of this tool, it is worth 10% of your grade. If used regularly, it can increase your understanding considerably.

### **Study Groups**

I strongly suggest that you form study groups. “For most individuals, learning is most effectively carried out via social interactions.” (Ed Redish)

Reading, Problem Sets, Topics

**Part 1. Oscillations, Waves, Sound, Fluid Mechanics**

date	Reading due	Problem Sets due	MP due	topics
13-Jan				introduction, syllabus
15-Jan	13.1-3			simple harmonic motion
20-Jan	13.4-5		1	pendulum, etc
22-Jan	13.6, 14.1-2	Ch 13 - 7, 15, 23, 31, 33, 45		physical pendulum, fluid pressure, density
25-Jan	14.3-5		2	bouyancy, Bernoulli's eqn, laminar flow
27-Jan	15.1-3	Ch 13 - 53; Ch 14 - 5, 17, 33, 37, 41		mechanical waves
29-Jan	15.4-5		3	transverse waves, energy
1-Feb	15.6-8	Ch 15 - 5, 7, 9, 17, 21, 23		interference, standing waves, resonance
3-Feb	16.1-2		4	sound waves
5-Feb	16.3-4	Ch 15 - 29, 35, 45, 47; Ch 16 - 3, 11		intensity, standing sound waves
8-Feb	16.5-8		5	resonance, beats, Doppler effect
10-Feb		Ch 16 - 15, 27, 31, 33, 39, 43		review
12-Feb				Test #1

Test #1 – Fri 2/12 – Chapters 13-16

**Part 2. Thermal physics, thermodynamics**

Test #2 – Fri 3/26 – Chapters 17-20

**Part 3. Optics, Physical optics, Interference**

Test #3 – Wed 4/28 – Chapters 33-36

Final Exam – Tue 5/4 – Comprehensive
